

## CNT5517 Mobile Computing FALL 2020

Name: Hsiang-Yuan Liao

UFID: 4353-5341

### LAB1

1.

Volley get some 301 errors for getting the image.

It is because it doesn't support http image url, which the images are already using https.

So I fix this problem by changing http to https to get the image I want.

2. Also came up with some issue for building the org APIsearch package. I add

```
maven {  
    url 'https://maven.google.com'  
}
```

into build.gradle file to let the package build correctly.

3.

Not sure what kind of Extra Credits will we get for implementing my favorite feature. Which somehow is more difficult and time consuming.

It might need to implement RoomDatabase and DOA with SQLite to store the Datums.

Maybe for next Lab, if there are more hints or specific Extra Credit points, I will arrange more time to get this kind of extra feature done. But this time, I am facing a more difficult project in other courses :((

Some Screenshots:
